WHO ARE WE?

ULC Standards develops and publishes standards and other related publications for building construction, security and burglar protection, environmental safety, electrical equipment, fire protection equipment, gas and oil equipment, thermal insulation products, materials and systems, energy use in the built environment and electrical utility safety.

ULC Standards is a not-for-profit organization and is accredited by the Standards Council of Canada as a Standards Development Organization.

National Standards of Canada developed by ULC Standards conform to the criteria and procedures established by the Standards Council of Canada. Such standards are prepared using the consensus principle by individuals who provide a balanced representation of interests relevant to the subject area on a national basis including consumers, manufacturers, government agencies, users, regulatory authorities and other interested parties.

WHY BE A MEMBER?

ULC Standards Committees are comprised of experts representing users, producers, regulators, general interests, and consumer groups. These experts are volunteers who generously contribute their time and knowledge, and work together with ULC Standards' staff in order to develop standards.

Volunteer committee members are an invaluable part of the Standards Development Process and critical to ULC. In return for their service, volunteers will gain important experience that can aid in their own professional development. They will also meet and share knowledge with others in their field or industry.

HOW CAN I CONTRIBUTE?

As a participating member, your role includes but is not limited to:

- actively participate in and undertake committee work available online and in-person;
- attend meetings;
- represent an industry group and bring forward any concerns; and
- work in a collaborative manner to effectively generate consensus based Standards.

Standards are essential in helping ensure public safety and confidence, reduce costs, improve quality and market products and services. This is your opportunity to contribute toward product and performance standardization to ensure the safety and health of all Canadians every day and every moment of their lives.
